Join Biohazard 4 layout Bin forum & learn more from experts. I didn't have any problems with my first. My second only had 1 bag that leaked and I found that she had some air in the base. The only way to fix it was to seal it with a cajou base and seal it with a slightly smaller bin. Don't worry, that is what I was doing when I posted a pic of the leaky bag. I finally sold the bin and bought one where the liner is held in place by a glued liner. That is what I did and it is perfectly stable. Yes I know what you are talking about. I use the cajou base as well. I found it more stable and easier to remove the liner than using the glue. Also I tend to store in the basement. It doesn't really matter to me if it has issues because of that. I would just like to add that I use a heavy duty one liner from a local hardware store that I get for free, in large rolls. I have no problems with it at all. Since it's so much cheaper than the plastic bins, I use it more often. I hope this helps... I'm about to use a cajou as well to use a fabric liner. I found a long piece of 1/4 inch flexible plywood (aka any kind of flexible wood) at the local lowes last week and had it cut down to an

---

11.5" square. The idea is to cut down a couple of sheets and wedge them between the two halves of the bin to form the base. I made a second bin with the cajou base and a piece of a 1/2" pine board to hold the liner in place. This second one has the option of having both sides lined with 1/2 inch liner. For the initial bin, the base is glued to the bottom. The new bin works as the old bin, 82157476af
